TASK 01

Business Sales Performance Analytics

Internship

Future Interns – Data Science & Analytics Internship

Project Overview

This project analyzes the Sample Superstore dataset to understand business sales performance, profitability, customer activity, and regional performance.

Tools Used

- Python
- Pandas
- NumPy
- Matplotlib
- Google Looker Studio
- Google Sheets

Project Objectives

- Analyze total sales and profit.
- Identify the best-performing product categories.
- Compare sales and profit across regions.
- Analyze monthly sales trends.
- Identify the top 10 products by sales.
- Build an interactive business dashboard.

Key Performance Indicators

- Total Sales: $2,297,200.86
- Total Profit: $286,397.02
- Total Orders: 5,009
- Total Customers: 793
- Profit Margin: 12.47%

Key Insights

- Technology generated the highest sales.
- The West region recorded the highest sales and profit.
- Furniture had comparatively low profit despite substantial sales.
- The Tables sub-category recorded a loss.
- The overall business profit margin was approximately 12.47%.

Dashboard

The interactive dashboard was created using Google Looker Studio.

Project Deliverables

- Python data cleaning and analysis notebook
- Cleaned dataset
- Interactive Looker Studio dashboard
- PDF dashboard report

Conclusion

This project demonstrates how Python and data visualization tools can be used to transform raw sales data into meaningful business insights and support data-driven decision-making.
